## TAL-BassLine 1.5.5

TAL-BassLine Serial Key is a plugin designed to produce some of the most sought after low-end bass effects ever made. A lot of bass sound producers used to use the extremely low end prototype bass synthesizers available in the 90s. But then the evolution of the instrument took a turn, and all the low end instruments became high end. As a result, we have low end instruments that sound more like guitars, or a sound that is not at all bass oriented. TAL-BassLine Cracked Version will make all this a thing of the past by offering you some of the most sought after sound effects for bass and acid sounds. Features: -18dB low pass filter with a lot of asymmetric and random components. -Dual stage ADSR (Attack Decay Sustain Release) envelope. -200+ Drum patches (pitch and multiples, bass and leads, open, leads, mutes). -Multiple MIDI effects (MIDI Learn function, octave shift, octave down, frequency modulation, filter modulation, distortion, ring modulation, delay, phase shifter). -Multiple filters (the most standard low pass, high pass, band pass, hi-pass, band-reject and a bit of a notch filter). -A wide range of synthesis techniques (LFOs, step sequencers, arpeggiators). -Cubase integration - a wide range of preset presets for different instrument and sound effects.
